

GUARANTEE

CostaLab guarantees the absence of structural defects in their products and the equipment with their brand, the absence of structural defects. This because before being placed on the market, the products are regularly tested to identify any anomalies. The warranty covers the normal use of the products and is understood as follows:

- 🔩 The warranty period is two years from the sale date.
- 🔩 The warranty covers product defects not attributable to incorrect or improper use of the equipment.
- 🔩 The warranty is not valid for defects caused by a different use or incompatible power devices than those indicated in the instruction.
- 🔩 The CostaLab products are handmade with high engineering standards. Possible, but not desirable, defects due to construction errors, will be repaired free of charge.
- 🔩 Only the cost to delivery products to and from our workshop for repair are to be understood by the customer.
- 🔩 Are excluded from the warranty: rubber parts, knobs, and parts that wear out with normal use.
- 🔩 The warranty is void automatically if the customer, without our written permission, tamper with equipment in an attempt to repair or to make changes or modifications to the original product.

The respect of these obligations ended our guarantee. We are exempt from any liability for any damage direct or indirect, and any other title with no exclusions or exceptions.

DUAL DRIVE

VINTAGE GAIN, MODERN SOUL

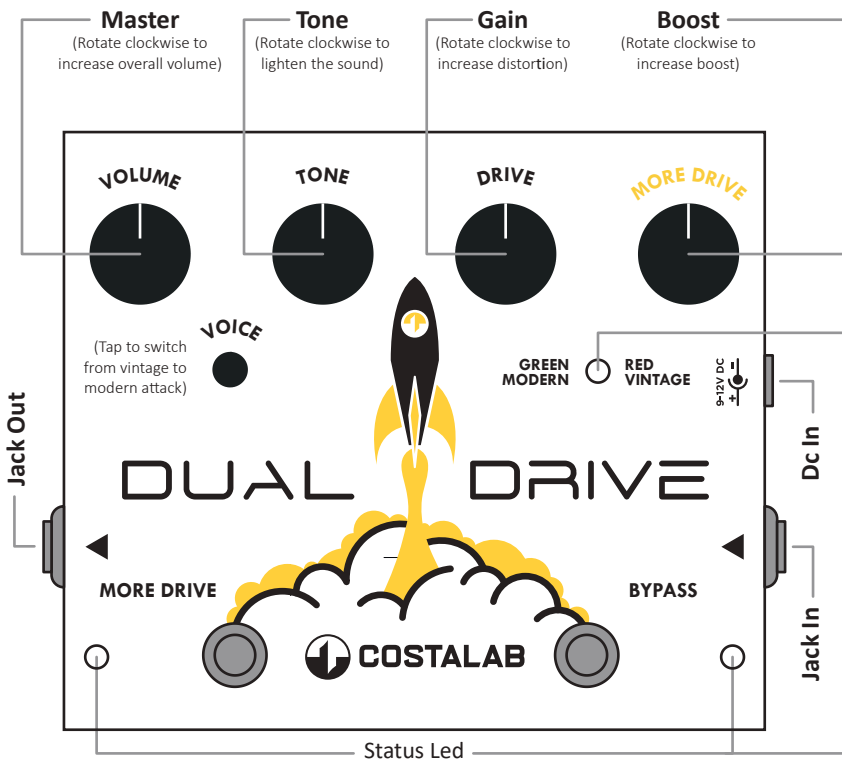

THE DUAL DRIVE

From Blues to Rock, Pop and beyond, the sound of an 808 overdrive was and still is an universally recognized icon.

It's a difficult task to build a new pedal in this sonic landscape, avoiding to create another pointless clone while keeping the recognizable roots.

The **Dual Drive** was born by taking everything we love about the 808 and shaping it for today's music.

Two separate gain controls allow you to choose between two different “worlds” of sound without having to manually operate the pedal. Moreover, the presence of two separate distortion circuits offers a valid alternative to the classic tone we are used to. Combining the controls you can get four different, great sounding, combinations that can be enjoyed in a variety of situations.

By conveniently placing the electronics on the printed circuit board and optimizing the ground planes for a true clean power path, the signal-to-noise ratio has been considerably improved.

The general quality level of the key components was also upgraded to greatly improve the general sound quality and timbre. Dual Drive will grant you a wonderful sound palette, all in one single, built-to-last, stompbox.

SUPPLY

Battery: the pedal is powered by a **9 volt** battery type MN1604. The circuit is turned on by inserting the jack into the Input. To install and/or replace the battery, simply remove the fixing screw of the battery cover located on the bottom of the stomp box. To extend the life of the battery, remove the jack from the input when you stop using the pedal. If you do not use the battery for a long period of time, remove it from the pedal. The battery is not included.

External power supply: it is possible to power the pedal with an external 9 - 18 volt DC power supply unit which is connected by means of the classic 2.1 mm DC connector with central negative. Current draw is less than 20 mA.

We suggest to use our filtered and stabilized **POWER FACTORY** power supply or AN equivalent one. Using a different power supply may generate unwanted noise and, in special cases, can damage the product. It is however possible to keep the battery inside the pedal even when it is powered by the DC socket, because the external power supply system can automatically exclude it.

Dimensions: 118x98x34mm excluding knobs and jacks.
